

KRUBOTS

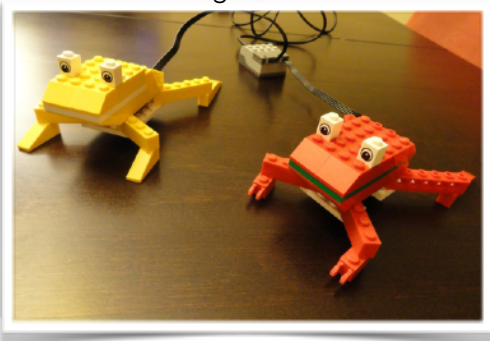

LEGO® Robotics & STEM ENRICHMENT PROGRAM

Robotics for beginners

Our LEGO Robotics class is a great program for beginners and kids who've had limited exposure to robotics. In this class, students will follow step-by-step, on-screen directions to build and then program their robots - with our instructor's guidance and supervision. After that, those who are ready can write more complicated programs involving **motion or tilt sensors**.

The following areas will be explored by the students: **Robotics, programming, logic, mechanical engineering.**

Recommended for ages **5 – 13**
